

OVIGOR®

4 GENERATIONS

2021

30 years together!

You may be wondering why you're being greeted by a little girl on the cover of the catalog published in the year of our 30th anniversary.

The heroine of the title page, Nela, is the youngest member of the family and at the same time a representative of the fourth generation of the family business that was established out of great love for pigeons. With great curiosity and interest, she looks at her great-grandfather's hobby.

*Over the last 30 years, the family business has brought together a team of specialists in veterinary medicine, animal technology, animal nutrition, as well as practitioners of the art, i.e. fanciers. This group has been overseeing the development and continuous improvement of essential products. Thanks to this **OVIGOR** is now positioned among the most recognizable pigeon sports brands in Europe and worldwide. Owing to their high quality and reliability, **OVIGOR** products have been included in flight programs of leading fanciers for years. Direct contact with fanciers and meeting all challenges are the foundation of our company.*

TRADITION, RELIABILITY, PROFESSIONALISM, REASONABLE PRICE are the foundations of fanciers' trust in the **OVIGOR** brand products. As a testimony to our professional achievements, we present to you today our Jubilee catalog 2021 with tried and tested nutritional programs enriched with some new items such as NaKark, OviBlack or OviMix.

Let our experience and ongoing hard work continue supporting you in the pursuit of our shared passion. And let the young heroine from the cover be a symbol of an optimistic outlook to a bright future.

Take care!
The **OVIGOR** team

VitaMixer® B

Vitamin B complex for pigeons

Vitamin complex for pigeons in situations of B-vitamin deficiencies, especially in stressful situations (races), vaccination periods (e.g. paramyxovirus), growth periods, in case of digestive diseases, infectious diseases, after antibiotic treatment. Has a positive effect on the nervous system, muscle metabolism and epithelial tissues.

Net volume: 250 ml

Dosage: 5 ml / 1 l water - 2x a day:
breeding - 2 days a week,
races - 2-3 days a week,
after antibiotic treatment - 2 days a week.

VitaMixer® E+Se

Supplier of vitamin E and selenium for pigeons

Vitamin E is necessary for the maintenance of high fertility and physiological performance of muscles and blood vessels. Selenium in combination with vitamin E contributes to proper development and muscle growth. VitaMixer E+Se should be administered in the breeding period, before pairing, in racing periods, and in cases of vitamin E and selenium deficiency.

Net volume: 250 ml

Dosage: 5 ml / 1 l of water - once a day
pairing - 3 times a week,
30 days before pairing day

VitaMixer® Multi

Vitamin complex for pigeons

Excellent combination of the most important vitamins, minerals and amino acids for pigeons. Prevents the results of micronutrient deficiency in periods of increased demand: breeding, separation of young pigeons from mothers, intense growth and development, stressful situations (races and exhibitions), moulting, and recovery from illnesses and after vaccinations

Net volume: 500 ml

Dosage: 2-5 ml / 1 l water, once a day
breeding, moulting - 2x a week (combined with Ovigor Mineral+IRON)
races - 2x a week (start and end of the week)
regeneration - 3x a week

Echinacea

A preparation of plant origin stimulating the body's immune system, raising resistance to bacterial and viral infections

Echinacea is a natural product obtained from plants. It stimulates pigeons immunological system, raises resistance against bacterial and viral infections. Applied after antibiotic therapy, in a state of body weakness (moulting) and stressful situations (flights, exhibitions, vaccinations).

Net volume: 250 ml

Dosage: 10 ml / 1 litre of water
pairing - 1 x per week
the flight season, young pigeons - 2 x consecutive days at the beginning of the week
moulting, winter - 2-3 x per week

30 YEARS

OVIGOR®

OUR PRODUCTS

Elektrolity

Strength for flights

The preparation is essential in breeding in case of electrolyte deficiency, particularly during periods of increased effort, especially during the flight season. Its composition contains glycine that plays an important role in detoxification; it binds with toxins and then is excreted in the urine. Appropriate use of the preparation reduces damage caused by stress (transport, temperature, etc.); helps maintain a proper electrolyte balance; prevents dehydration; and effectively restores vitality after effort.

Net volume: 500 ml

Dosage: 5ml / 1l water - before stressful situations (exhibitions, loft change, transport), over 2-3 days
3ml / 1l water - immediately after the return from flight,
3ml / 1l water - regeneration (after treatment, flight, etc.), over 2-3 days,
1ml / 2l water - preventive treatment (e.g. hot days), daily.

FORMA

Dietary food supplement for pigeons for lasting form containing electrolytes

Increases the pigeons fitness and psychomotor performance, preparing it for intensive effort. The preparation quickly and effectively regenerates the body after effort and guarantees quicker restoration of fitness. It also serves as protection in case of heat stress - high outside temperatures.

Net volume: 500 ml

Dosage: 3 - 5 ml / 1 l water - before flight season 2x a day over 2 days,
3 ml / 1 l water - before the flight 2x a day before packing day,
5 ml / 1 l water - after the flight and in the form of the second drink

Mineral + IRON

Supplementary feed for pigeons

A rich combination of minerals, essential for the proper functioning of the pigeon's body. Optimal Iron (Fe) content stimulates the red blood cell production, increases the oxygenation of muscles and raises their endurance. Iron is a component of red blood cells. It has a great impact on the pigeons' chest muscles, turning their colour into a deep pink, and preventing the skin from flaking. The preparation facilitates the creation of strong eggshells and, during the raising period, helps develop strong bones in young birds. During the racing season, the preparation ensures the proper functioning of the muscular and nervous systems. In the moulting season, it helps develop healthy, strong feathers. It strengthens the pigeon's immune system and physical fitness. Minerals are most bioavailable in the liquid state.

Net volume: 500 ml

Dosage: 3-5 ml/ 1 l water

Preparation for breeding: start serving approx. 14 days before pairing, twice a week

Raising of young pigeons: 3 times a week

After weaning young pigeons: twice a week

Racing season: once a week (beginning of the week)

Moulting season: 3 times a week, combined with

OVIGOR Mauser liquid

OlejMix

Natural oil extract of sunflower, corn, soybean, flax, peanuts, wheat germs and lecithin

Oils are a very important building material for the whole organism. They play an important role in preventing diseases, especially when the body is weakened by stress, illnesses, use of antibiotics or other drugs. Ensures silky plumage, improves fitness and increases energy reserves, creates own reserves of fat (lecithin), increases fertility, strengthens the body of young pigeons, increases immunity.

Net volume: 250 ml

Dosage: 10-15 ml over 1 kg feed.

breeding and young pigeons - 1x a week

flying and moulting season - 2x a week (beginning and end of the week)

Mauser

Supplementary feed mixture for pigeons. Great plumage - foundation for future flight results!

The preparation supports the formation of healthy and strong plumage, ensuring its high flexibility. Methionine included in the preparation is an essential amino acid containing sulphur. This component is beneficial to the proper functioning of the liver and it is included in the proteins that build up feathers. Choline contained in the preparation is particularly necessary during the period of intense exercises and during the plumage changing period. Vitamin B4 (choline) is essential for the transport and metabolism of fats.

Net volume: 500 ml

Dosage: 10 ml / 1 l water or 1 kg feed

breeding period: 2x a week (younglings over 8 days)

moulting period: 2-3 times a week.

JodPower®

Preparation for lifting the results of pigeons

Preparation for the increase of flying performance of pigeons. Using this product helps achieve very good results (peak form), because it improves blood flow and oxygen transport to cells thanks to the iron included in the preparation - essential for the production of red blood cells. Iron increases the speed of a pigeon returning from a flight. Iodine acts directly on the thyroid gland, increasing endurance and stimulating the metabolism.

The product provides vitality and immunity, guarantees snow-white cere, clean throat, glossy feathering and pink chest muscles. Well absorbed iodine and iron greatly improve the health of pigeons.

Use of ceramic or glass waterers is recommended. Do not use copper and zinc coated waterers!

Net volume: 100 ml

Dosage: 20-30 drops per 2 litres of water.

flying season: 2 x per week

breeding: 1 x per week

moulting: 2 x per week

30 YEARS

OVIGOR®

OUR PRODUCTS

OviYeast Essence

Natural preparation containing biologically active enzymes of yeast cells, easily absorbed vitamins, amino acids and trace elements.

Ensures the maximum convalescence of pigeons, supports oxygen conversion, strengthens immunity, improves form during flights, supports in case of exhaustion and tiredness (raising younglings, flights, moulting)

Net volume: 250 ml

Dosage: Pour about 10-15 ml to 1 kg of feed and mix carefully.
flight season: 2 times in the beginning of week (2 next days)
breeding season: 1 time a week
moulting season: 2 times a week

The prepared feed can be supplemented by a different preparation in a powder form (e.g. **GardenMix, RobAut, OviCalgen, Glukoza C**, etc.).

VirAut®

Preparation containing a mixture of organic acids

Provides effective defense from bacteria (E Coli, Salmonella). Has a stabilising effect, reducing acidity, prevents the fattening of pigeons. Using VirAut positively affects the immune and digestive system (free from yeast and mold). Allows a better nutrient absorption from feed.

Net volume: 1000 ml

Dosage: twice a day
3 ml / 1 l water - preventive - 1-2 days,
5 ml / 1 l water - over 2-5 days (in case of diarrhea and during medical treatment)
pairing – 1 x a week,
flying season – 1 x a week (start of the week),
young pigeons – 2 x a week,
moulting and winter – 2 x a week.

RobAut® Essence

A preparation for deworming and protection against infestation!

RobAut Essence consists of natural ingredients on the basis of plant substances having a positive effect on the digestive system. using the preparation helps protect the pigeons from negative effects of alien organisms in the digestive tract (roundworm, capillaria, tapeworm), which helps achieve better results in breeding and in races.

Net volume: 250 ml

Dosage: 10 ml / 1 l water or 10 ml / 750 g feed
10 days *before planned vaccination*- use for 3 days.
14 days *before planned breeding* - use for 2 days.
14 days *before competition flights* - use for 3 days, after 4 weeks repeat - for 2 days.
after flights of old and young pigeons- use for 3 days.

EukalipsorMint®

Pure respiratory system - greater flight possibilities

The EukalipsorMint supports the proper functioning of the respiratory system. It increases the secretion of mucus, thins the mucus in the nostrils (dry cold) and the bronchi. During the flight season, it is used to improve the physical efficiency. On hot days, the EukalipsorMint protects the mucosa of the respiratory tract from excessive drying. EukalipsorMint has a beneficial impact e.g. on pigeon's immune system.

Net volume: 1000 ml
 Dosage: 10 ml / 1 liter of water
cleaning after winter - 5-7 days
young pigeons - 1 x per week
racing season - 2 x per week (beginning of a week)
moultin season - 2 x per week
changes in the respiratory system - 10-14 days

OviNegar 8%

Supplementary feed mixture for pigeons - natural infection blocker

Apple cider vinegar has been proven to be a perfect acidifier, ensuring low pH in the pigeon's digestive system, and creating a bacteria-free environment (eg. coli, salmonella, etc.). OviNegar with an optimal 8% acidity, inhibits the creation of a harmful flora in drinking water. It has a positive effect on blood pressure and the pigeon's digestive system. Thanks to the unique production process, it doesn't give off the unpleasant smell specific to vinegar.

Net volume: 1000 ml
 Dosage: 10 ml / 1 l of water:
 all year long 2-3 times a week. In the period before pairing and after weaning, administer daily for 10 days.

GarlisOil

Natural oil extract of garlic and soya bean with vitamin E

Garlic oil, as a natural product, stimulating digestion favorably affects the proper functioning of the digestive tract and improves the functioning of the pigeon's immune system. The active ingredients of garlic create an environment free of germs, yeasts, fungi and viruses. Soybean oil is a source of energy, and lecithin, called a "fat slayer", breaks down fats into particles and prevents them from sticking to blood vessels. Supports muscle endurance. Vitamin E adds vitality (is considered a vitamin of youth).

Net volume: 250 ml
 Dosage: 10-15ml of GarlisOil pour on 1kg of food and mix thoroughly. Another preparation in a powder form (e.g. **OregaStar**, **GardenMix**, **RobAut**, **OviYeast Essence**) can be added to the prepared portion. GarlisOil should be used 1-2 times a week throughout the year.

30 YEARS

OVIGOR®

OUR PRODUCTS

OviAmin FORTE®

Amino acids - Electrolytes - Vitamins

OviAmin FORTE is a liquid dietary supplement for pigeons. It contains a large dose of amino acids, electrolytes and vitamin B in optimal proportions. Indispensable during flights (after a competition flight - carbohydrates affect muscle recovery. Amino acids contained in the supplement cause slower muscle fatigue - muscular tissue remains more efficient and intact. Also indispensable during moulting, during drug treatment and in breeding. Due to the composition, the OviAmin FORTE can be administered throughout the year.

Net volume: 1000 ml

Dosage: 15 ml per 1 liter of water or 1 kg of feed

flight season: the first watering after a flight, the end of the week

- before a flight

moulting period: 3-5 times a week

drug treatment: daily

rearing period: 2-4 times a week

OviTalina FORTE

Supplementary feed mixture for pigeons

A perfectly composed blend of 16 herbs, vegetables and fruits extracts, the active substances of which improve the overall condition and resistance of pigeons. Vegetables, fruits and herbs are selected for their proper influence on the respiratory tract, digestive, muscular and vascular systems. When administered regularly, pigeons have pink muscles and skin on their breasts (visible veins of blood) - a sign of a cleansed organism. The plumage becomes shiny, soft and velvety. During the flight season. OviTalina FORTE allows to gain more energy and increase flight endurance. Quickly regenerates after a flight. OviTalina FORTE has been specially developed to increase the performance of pigeons during the flight season. The aromatic smell of the extracts makes the pigeons eager to drink it.

Net volume: 500 ml

Dosage: *treatment before the flight season:*

14 days after 15 ml / 1 liter of water or per 1 kg of feed

flight season:

2-3 x a week, 10 ml / 1 liter of water or per 1 kg of feed per week

a noticeable drop in flight form:

15 ml / 1 liter of water or per 1 kg of feed for ca. 4-5 days

moulting period: 1-2 x weekly 10 ml / 1 liter of water or per 1 kg of feed per week

reproductive period: 1 x per week, 10 ml / 1 liter of water or per 1 kg of feed per week

OviDachol

Supplementary feed mixture for pigeons - better fat burning optimizes regeneration

Prevents excessive build up of fat in the liver and kidneys, and optimizes recovery. Choline ensures, among others, better fat burning. Sorbitol improves the metabolism of proteins, thereby supports muscle growth and proper development of feathers. Very well purifies the blood and the body of toxins, strong muscles become light pink after one day of use.

Net volume: 500 ml

Dosage: 10 ml / 1 liter of water or 750g of feed

breeding - 2-3 times per week

moulting - 2-3 times per week

after competition flight - 1-2 next days (start of the week)

after antibiotic treatment - 3-4 next days

OviTalina

A natural immune and conditioning preparation

A perfectly composed blend of 16 herbs, vegetables and fruits extracts, the active substances of which improve the overall condition and resistance of pigeons. Natural plant extracts of carrots, celery, parsley, leek, beetroot, papaya, kiwi, pineapple, thyme, black turnip, horseradish, hawthorn, artichoke, willow bark, coneflowers, nettles found in OviTalina are selected for proper effects on the respiratory tract, digestive system and excretory system. When administered regularly, pigeons have pink muscles and skin on their breasts (visible veins of blood) - a sign of a cleansed organism. The plumage becomes shiny, soft and velvety. It stimulates the appetite, increases the flight performance of pigeons. The aromatic smell of the extracts makes the pigeons eager to drink it.

Net volume: 1000 ml

Dosage: The highest efficiency of the OviTalina product is obtained through systematic, yearlong usage.

Reproduction Period: 2 x 10 ml/ 1 liter water or 1 kg of feed

- 2 x per week twice a day.

Withdrawal of young pigeons, it is recommended to be administered for 10 days (10 ml/ 1 liter water) - 2 x per day.

Flight season: 2 x per day (beginning of the week) 10-20 ml/ 1 liter of water or 10 ml/ 1kg of feed.

Moulting: 2 x per day 3 x per week 10-20 ml/ 1 liter of water or 10 ml/ 1 kg of feed

Winter period - 3 x per week 10-20 ml/1 liter of water or 10 ml/1 kg of feed

OregasOil

Natural oil extract of milk thistle and soybean with vitamin E

Milk thistle seeds contain silymarin that perfectly protects bird liver and has regenerative effects in case of liver diseases; it also has detoxifying and cleansing properties. It increases gastric acid secretion and increases appetite. It strengthens blood vessel walls. It has beneficial effect on renal parenchyma affecting the excretion of toxic compounds. Soybean oil is a source of energy, whereas lecithin, known as "defeater of fat," breaks down fat molecules and prevents their attachment to blood vessels. It helps maintain muscle strength. Vitamin E provides vitality (considered the vitamin of youth). It also protects the liver, detoxifies it, regulates metabolism and increases appetite.

Net volume: 250 ml

Dosage: 10 ml over 1 kg feed.

Serve throughout the year - 2x a week.

OviSprint + CARNITINE

Maximum energy, efficiency and durability.

The function of carnitine is based on the transport of free fatty acids to the cells, where those acids can be burnt to obtain energy. Selenium increases immunity, affects the proper functioning of the liver and the muscle activity. Vitamin B12 supports the creation of hemoglobin, so that the body can absorb more oxygen, which in turn increases endurance. This substance increases the energy and endurance potential. It helps race pigeons to achieve better results. It speeds up the metabolism, which increases form, prevents acidification of muscles and protects them against fatigue (competition races). It maintains high efficiency of skeletal muscles and cardiac muscle.

Net volume: 500 ml

Dosage: 110 ml / 1 liter of water or 15 ml / 1 kg of feed

short-distance flights: for 2 days before the race (the basketing day – fresh water)

medium-distance flights: for 4 days before the race (the basketing day – fresh water)

long-distance flights: for 5 days before the race (also on the day of basketing)

30 YEARS

OVIGOR®

OUR PRODUCTS

JodPower

Supplementary liquid feed mixture for pigeons

An optimal iodine and iron content in the preparation ensures maximum stamina and endurance of the pigeons, leading to higher flight speed. Iodine has a positive effect on the growth and development of young birds, as well as the proper functioning of the nervous and reproductive systems. It ensures a clean digestive tract by creating an environment clear of fungi, and protects the pigeons from the problem of "youngling disease".

Net volume: 500 ml

Dosage: 2x a week: 10 ml / l of water or 1 kg of feed

Apply during races, breeding periods, moulting periods, and in the winter

RobAut®

RobAut is a natural product obtained from plants that play a particular role in pigeon diet

It complements the basic feed and ensures a clean gastrointestinal system, protecting pigeons from adverse effects of worms residing in the gastrointestinal system. Therefore, it guarantees good health and greater opportunities to achieve good results in flights and breeding.

Net volume: 300 g

Dosage: 10g / 1 kg of feed

treatment - 2x a day over 5 days. Repeat after a 14-day break, every 2 months (approx. 14 days before pairing, flying and moulting).

Moisten the feed with an OVIGOR oil (GarlisOil, OregasOil or OstrosOil), add RobAut Powder and stir. Once the powder sticks to the grain, the feed is ready to be served.

OviPremium

Mixture of oregano and garlic

OviPremium is a natural plant preparation of oregano and garlic. The high content of thymol and carvacrol in oregano effectively protects against bacteria, fungi, parasites and coccidia. Garlic has a positive effect on the functioning of the pigeon's immune and digestive system. OviPremium supports and helps maintain good health and regeneration throughout the year and effectively strengthens the immune system – especially of young pigeons. The use of this product helps improve the efficiency of the feed and hatching yields. It also helps get better results in races.

Net volume: 300 g

Dosage: 5 g / 1 kg feed throughout the year.

young pigeons, after weaning - 2-3 times a week

GLUKOZA C

Supplementary feed for pigeons with glucose and vitamin C

The water-soluble glucose preparation is a source of easily assimilable monosaccharides used for restoring energy reserves. It maintains the appropriate level of water in the body. It also prevents dehydration and accelerates recovery to health and form. Thanks to glucose and vit. C, pigeons easily regenerate their strength and achieve better flight performance.

FIRST DRINK AFTER THE FLIGHT!

Net volume: 400 g

Dosage: 10g per 1 liter of water

shall be given as the first drink on return from flight after diseases and during moulting: for 2-3 days

GardenMix

Vegetable mix – supplementary feed for pigeons

GardenMix a mix of natural, light, dried and nutritious vegetables that have not undergone any chemical processing. Vegetables are the natural source of potassium, phosphorus, calcium, magnesium, zinc, copper, iron, molybdenum and iodine; they contain vitamins A, B1, B2, B6, C, PP (parsley, carrot). They contain bacterial substances (onion) and detoxifying substances (parsnip).

They prevent anaemia and stimulates appetite (beetroot).

Pigeons of the best fanciers feed on garden patches adjacent to their loft in search of valuable vegetables in the fresh form. **GardenMix** makes it easier for birds, guaranteeing the most valuable of vegetables in a powder form easy to digest.

Net volume: 500 g

Dosage: 20g/1kg of feed, every 2nd-3rd day to one of the meals.

Moisten 1 kg of feed with an OVIGOR oil (e.g.: **OregasOil**, **OstrosOil**, **OlejMix**), pour **GardenMix** and stir. After the powder sticks to the grain, the feed is ready to be served.

OregaStar

Supplementary feed mix

OregaStar is a natural plant preparation with oregano that has mild and multidirectional action. Oregano binds harmful (toxic) products of metabolism and removes them from the body, stimulates the secretion of saliva and gastric juices; increases appetite; strengthens the stomach; improves digestion and assimilation of food. It has carminative properties, enhances the secretion of mucus in the mucous membranes of the upper respiratory tract

Net volume: 350 g

Dosage: 10 g / 1 kg feed

It is recommended to be served throughout the year, 2x a week, especially in hatching and moulting periods.

Moisten the feed with an OVIGOR oil (**OregasOil**, **GarlisOil**, **OstrosOil**), add **OregaStar** and mix. Once the powder binds to the grain, the feed is ready to be served.

PowerMix®

Excellent condition during flights!!!

Conditioning powder for carrier pigeons with prebiotics, electrolytes, amino acids, energy carriers, minerals, trace elements and vitamins for administration in the feed.

- a combination of active compounds that ensures the condition necessary to achieve leading results
- the preparation contains vitamins, minerals, trace elements, amino acids and other valuable ideally suited compounds
- applying POWERMIX helps achieve high flight performance (form) of pigeons and activate their metabolism
- has a beneficial effect on the immune system
- helps with exhaustion and fatigue (rearing of younglings, flights, moulting)

Net volume: 300 g, 600 g

Dosage: - *flight season*: 2-3 times a week (4 feedings before putting on the flight)

- *breeding season*: 1 time a week

- *moulting season*: 2 times a week

10 - 20g per 1kg of feed in combination with **OlejMix** (before the flight as a dose of energy) and 10 - 20g per 1kg of feed in combination with **OviYeast Essence** (after the flight for regeneration).

Mauser powder

Herb mix supporting moulting

Plumage powder is a natural mix of herbs supporting moulting of pigeons. It provides the body with nutrients necessary for new feathers to grow. It prevents fragility and dandruff. Plumage powder loosens the skin, facilitating shedding of feathers. It accelerates healing after the shedding. The preparation also strengthens the pigeon's body. For stronger plumage, the preparation should be administered throughout the year, at least once a week. During the moulting period, in order to facilitate the process and ensure a strong plumage, it should be administered 2-3 times a week.

Net volume: 350 g
 Dosage: 10 g / 1 kg feed - 2x a day
breeding - 1x a week
moulting - 2-3x a week

OviYeast PRO

Supplementary feed for pigeons with brewer's yeast and potato protein

Brewer's yeast strengthens and stimulates the appetite. It increases feed digestibility, improves fitness and physical performance, and has positive impact in case of digestion disorders. It's the natural source of B vitamins and pantothenic acid, folic acid, vitamin H as well as such trace elements as copper, iron, zinc, iodine and selenium. Today's feeds contain less and less legume seeds (source of protein!) as they are "heavy" to the gastrointestinal system. The perfect replacement is brewer's yeast that contains high-quality and easily assimilable protein. Research in the field of animal nutrition has shown excellent assimilability (90%) of potato protein, obtained in a very difficult and costly process of coagulation of potato cell sap. The share of potato protein makes **OviYeast PRO** an irreplaceable source of pure protein of the highest degree of digestibility.

Net volume: 600 g
 Dosage: 10g / 1kg of feed
Raising younglings: 2-3 times,
Flights: day after return all year round: 1-2 x per week

OviMin

Mineral feed mixture for pigeons

OviMin - a natural source of calcium from sea algae, essential to maintain health and to improve the results in the breeding. Besides minerals and trace elements, it contains natural vitamins and micro and macro elements. The algae that it consists stabilize the operation of the digestive tract by stimulating and maintaining the activity of beneficial microflora. Red meal improves digestion and reduces humidity of droppings. **OviMin** is a product that should be given throughout the year, particularly during periods of increased effort, that is, before mating to lay eggs, during rearing the young, flight season, as well as during the moulting period, what will facilitate the formation of new feathers.

- Prevents foraging on the fields
- Forms the skeletal system
- Supports the creation of egg shells
- Helps in the construction of new feathers
- Improves digestion
- Improves respiratory function
- Increases the activity of the immune system

Net volume: 1000 g
 Dosage: OviMin should be served to pigeons in separate bowls for free consumption, following the rule of "less but more frequent" to prevent the contamination of the mixture. OstrosOil), add

OviCalgen

Mineral feed mixture for pigeons with algae and essential oils

OviCalgen is a natural source of calcium with algae and essential oils. It is an excellent preparation necessary throughout the season, supplying minerals, natural vitamins, as well as macro- and micronutrients. Its regular administration will ensure healthy raising and growth of younglings, the perfect condition of flying pigeons and facilitate the formation of new plumage.

Net volume: 1000 g

Dosage: 10 g over 1 kg feed moistened with an OVIGOR oil (OregasOil, OstrosOil). mix until the powder binds to the grain.

OviGrit 1

Supplementary feed mixture for pigeons

Easily digestible grit containing the most important naturally occurring trace elements and mineral substances. Their presence in everyday feed ensures healthy growth and correct skeletal system formation (prevents rickets), it also guarantees good blood circulation as well as nervous and muscular system development. It prevents terrible results of poisoning in a field.

Net volume: 2,5 kg, 25 kg

OviGrit 2 red with anise

Supplementary feed mixture for pigeons

Easily digestible grit with anise containing the most important naturally occurring trace elements and mineral substances. Their presence in everyday feed ensures healthy growth and correct skeletal system formation (prevents rickets), it also guarantees good blood circulation as well as nervous and muscular system development. It prevents terrible results of poisoning in a field.

Net volume: 2,5 kg, 20 kg

OviGrit 3 with anise

Supplementary feed mixture for pigeons

Easily digestible grit containing the most important naturally occurring trace elements and mineral substances. Their presence in everyday feed ensures healthy growth and correct skeletal system formation (prevents rickets), it also guarantees good blood circulation as well as nervous and muscular system development. It prevents terrible results of poisoning in a field.

Net volume: 2,5 kg, 25 kg

OviGrit 4 EKO

Supplementary feed mixture for pigeons

Easily absorbable grit, containing the most essential naturally available trace elements and minerals. It ensures a healthy growth and the correct formation of the skeletal system, especially in young pigeons. It also provides the body with calcium and magnesium throughout the season. Ensures the correct functioning of the nervous and muscular systems, supports the formation of new feathers, and improves immunity. Prevents dangerous poisoning in the field. It has a pleasant smell of natural anise.

Net volume: 2,5 kg, 25 kg

All OviGrit should be available for the pigeons to consume without limit throughout the year. It should be administered in separate bowls going with the rule "less but more often" to avoid feed pollution and dust settling.

30 YEARS

OVIGOR®

OUR PRODUCTS

OviBiotyk

Stabilisation of the digestive system's bacterial flora

OviBiotyk is administered to restore and balance the intestinal flora, populate the bacterial flora in the digestive tract, and in case of digestive disturbances of various origin, also those resulting from nutrition mistakes (e.g. change of pigeon's feed). It brings relief from digestive issues, especially in younger pigeons, facilitates digestion, increases vitamin and mineral absorption. Has a positive effect on the immune system. The composition and concentration of the preparation plays a significant role in supporting the body, reducing the necessary antibiotic application time as well as the recovery time. It protects the body from excessive loss of water and electrolytes. Enterococcus bacteria enable to quickly restore the proper functioning of the intestinal microflora.

Net volume: 250 g

Dosage: 5 g on 1 kg feed

breeding - 2x a week

flying - 2 meals a day over 2 days at the start of the week

moulting - 2x a week

after treatment - 10 g over 1 kg feed over 2-3 days straight for the restoration of the digestive system's microflora

RobAut® TABS

Supplementary food mixture for pigeons

RobAut TABS is a natural product obtained from plants that play a particular role in the pigeon's diet. It ensures a clean gastrointestinal system, protecting pigeons from adverse effects of gastrointestinal parasites. It guarantees great condition in flights, and good results in breeding. Binds liquid excrement (food poisoning, diet change, stressful situations)

Net volume: 65g / ca. 190 pcs

Dosage: 1 tab twice a day

- *Winter treatment*: 5 days (continuous administration). After a 14-day break, repeat for 5 days again.

- *Approx. 14 days before pairing*: twice a day for 3 days (continuous administration).

- *Flight season*: every 3rd week for 2 days (beginning of the week).

- *Rearing and moulting*: 2 days (continuous administration)

PowerMix® TABS

Supplementary food mixture for pigeons

■ Accelerated strength recovery, ■ Combats fatigue, ■ Optimal composition of vitamins, amino-acids, electrolytes, trace elements, and energy carriers, ensuring great condition, essential to achieve great results, ■ Positive effect on immune system

Net volume: 80g/ ca. 250 pcs

Dosage: 1-2 tabs, once a day

- *Racing pigeons*: on the last two days before the flight 2 tabs and after the flight to strengthen the body 1-2 tabs

- *Preparation for breeding*: twice a week 1-2 tabs (4 weeks before pairing)

- *Raise of young birds, moulting, exhibitions*: twice a week - 2 tabs

Proteina 66% TABS

Supplementary food mixture for pigeons

PROTEINA 66% TABS is an easy to digest protein concentrate, which rebuilds and regenerates the pigeons' muscle tissue. The concentrate enables rapid return of pigeons to form after a long flight and prepares pigeons for the next flight. Supports digestion, immune system, promotes moulting. Improves feeding efficiency of nursing parents (faster and healthier growth of young pigeons).

Net volume: 65g / ca. 120 pcs.

Dosage: 1 tab once a day

- *Flight season*: after flight (depending on the difficulty of the race - 1-2 tabs).

- *Before flight* - over 500 km: for 3 days before the flight, over 700 km: for 4 days before the flight

- *Young pigeons during muscle growth*: 1 tab - twice a week

- *Moulting period*: 1 tab - twice a week

Magnesium

Supplementary mineral feed for pigeons

Magnesium is an indispensable nutrient. It supports neuromuscular conduction and optimises neuromuscular interaction. Magnesium deficiency in pigeons leads to muscle cramps related to flight difficulty. It reduces the risk of sore muscles during initial training after the winter and during flights. Magnesium is also responsible for the proper calcium absorption in bones and improves the bone density.

Net volume: 500 g

Dosage: Training after the winter and racing flights: 5-10 g per 1 kg of the feed. Use during flights: one day before the flight together with **OlejMix** and **PowerMix**.

PROTEINA 66%

Faster recovery! More power! Faster growth! Strong feathers!

PROTEINA is an easy to digest 66 % protein concentrate. Contains powdered milk protein and plant proteins (multiproteins). It is a natural concentrate that restores and regenerates muscle tissue. Muscles need protein for their quick recovery. The concentrate enables rapid return of pigeons to form after a long flight and prepares pigeons for the next flight. Supports digestion, immune system, promotes moulting. Improves feeding efficiency of nursing parents (faster and healthier growth of young pigeons).

Net volume: 250 g

Dosage:

Flight season:

- after flight - 20g / 1 kg of feed moistened before with **OviDachol**,
- before flight - 20g / 1 kg of feed moistened before with **OlejMix**.

Breeding and moulting season:

- 4 meals a week 20g / 1 kg of feed moistened beforehand with **OviDachol** or **OlejMix**

OviAirFresh

Preparation with essential oils for loft air refreshment

Provides a clean and friendly environment for pigeons. Breathing becomes easier, which allows for a better oxygenation, and therefore better form. Contains eucalyptus oil, mint oil and menthol.

Net volume: 1000 ml

Dosage: 2-3 times a week - spray over the whole surface of the loft. Can be used throughout the year, especially in periods of higher humidity and higher temperatures.

OviBad, OviBad Essence

Bath salt / liquid for pigeons with essential oils

OVIGOR bath salt is indispensable for pigeon baths. It softens the water, thus making feathers silky soft, shiny and flexible after bathing. Bathing with the use of OVIGOR bath salt makes moulting easier for pigeons: it removes dust, dandruff and callous skin. It loosens old feathers and down feathers, thus making their shedding easier. Crystals of essential oils contained in OVIGOR bath salt, soluble in water, have a soothing influence on open pores of the skin, locally relieve pain and improve blood supply in the skin. Additionally they ensure the effect of inhalation, improving the respiratory function

Net volume: 1 kg, 500g, 1000 ml

Dosage: Bath salt:

- Stir well before use. Pour 1 tablespoon (about 10g) to 5l of water and mix. After about 5-10 minutes (period requires for essential oils to dissolve), re-mix. Repeat baths 1-2 times a week.

Bath liquid:

- Pour 10ml to 5 l of water. Repeat baths 1-2 times a week throughout the year. Shake well before use!!!

30 YEARS

OVIGOR®

OUR PRODUCTS

MineralVit®

Supplementary mixed feed for pigeons

Mixture containing vitamins, amino acids, trace and mineral elements. Continuous access to the mixture ensures perfect health, as well as racing and breeding form. It strengthens the immune system and supports moulting.

Net volume: 2 kg, 7 kg, 20 kg

Dosage:

MineralVit should be given to pigeons in separate bowls for free uptake, remembering to serve "less but more often" to prevent contamination and mix-dust. As well as for feed: 10g/1kg moistened with oil, for example **OlejMix**, **GarlisOil** or **OviDachol**.

OviBlanco (POSYPKA HIGIENICZNA)

Effective disinfection!

It is effective against a wide range of pathogenic microorganisms: viruses, moulds, yeasts, mycobacteria. It cleans and perfectly absorbs moisture. It keeps nice lemon smell. The application of this hygienic powder ensures that the floors are dry, white and clean.

Net volume: 2 kg, 10 kg

Dosage: Sprinkle the loft floor and sweep after a while

KoraMix® tea

A mixture of the bark of three trees for preparing an infusion for pigeons to stimulate metabolism

The infusion of herbal raw materials included in the mixture perfectly supports digestive processes by creating an environment free from fungi and bacteria, shows antispasmodic properties and brings relief during strong diarrhoea. Regular administration of the mixture to pigeons has a significant effect on accelerating digestive processes and makes the plumage of pigeons shine.

Net volume: 400 g

Dosage: Sow 10g of tea into a filter and brew in 2l of boiling water.

Give the cooled down brew as the only drink to pigeons once a week.

In situations indicating problems with the digestive system, carry out a treatment lasting 5 days.

RegeneraMix® tea

Herbal mixture for the preparation of the infusion regenerating the organism and purifying the blood of the pigeons returning from the flight

The mixture of herbs the infusion of which has a purifying influence on the pigeon organism especially after the flight. Regular administration of the infusion has a regenerative and strengthening effect, cleanses the blood and improves the appearance of the plumage. Particularly valuable component of this mixture is hake, which speeds up the metabolism and secures the daily dose of iodine that facilitates the iron assimilation, while iron supports the oxygenation of the body.

Net volume: 400 g

Dosage: Put 10g of tea into a tea filter and brew in 2l of boiling water.

The folded filter will stick together, thus preventing the grounds from escaping. Give the cooled infusion to the pigeons as the only drink after returning from the flight. Prophylactically 1 x per week.

OVIGOR®
NEWS !!!

NaKark

Product for pigeon skin care and plumage care

The product eliminates and prevents the spread of external parasites on pigeon skin and plumage, in particular fleas, lice, chewing lice, mites. NaKark can also be administered to ornamental birds.

Net volume: 25 ml

Dosage: - *Prophylactically*: 2 drops per 1kg body weight. Apply on the neck skin (for pigeons 1 drop)
- *For parasite carriers*: 6 drops per 1 kg body weight. Apply 2 drops on the neck skin and 2 on each wing (for pigeons 1 drop).
The preparation lasts for about 200-400 uses.

OviBlack

Beak, plumage and skin care preparation for pigeons

OviBlack stops the development of pathogenic microbe (eg. antibiotic-resistant microbe), cleaning the digestive tract of bacterial toxins and other harmful products of metabolism. It creates an environment free of canker, parasites (coccidia), bacteria (salmonella) and viruses in the mucous membrane, esophagus, and the craw. It nourishes the pigeon's body and cleanses the blood. Sorrel is also a great source of zinc and vitamin A, used for the treatment of skin problems, like a balding craw.

Net volume: 30 ml

Dosage: *Beak, esophagus and craw hygiene*:

■ Post-winter treatment: 1 drop orally, 2 pipettes in 1l water over the next 3 days, ■ During egg incubation: 7-9 days from hatching - 1 drop orally, 2 pipettes in 1l Water over the next 2 days, ■ Weaning period - 1 drop orally, once, ■ Before old-pigeon races - approx. 14 days before the flight, 1 drop orally, once, ■ During old-pigeon races - 1 drop orally between flight 6 and 7, ■ Before young-pigeon races - approx. 14 days before the flight, 1 drop orally, once, and 2 pipettes in 1l water over the next 2 days, ■ After the racing season, and for new pigeons in the lost - 1 drop orally over the next 2 days.

Skin and plumage hygiene:

■ Once a month in bathwater with OviBad - 5 pipettes of OviBlack in 10l water, ■ bald craw - rub 1-2 drops into the skin with a pipette, repeat over 3-5 days

OviMIX

Supplementary feed mixture for pigeons

OviMix is an optimally balanced mineral and vitamin mixture for pigeons, ornamental birds, and ornamental poultry. It contains the most vital nutrients for the proper functioning of the pigeon's body, improves strength and health, boosts appetite. OviMix should be administered throughout the year, especially in periods of increased effort:

- *breeding period*: develops the bird's skeletal system, helps form a strong egg shell
- *racing season*: boosts racing pigeons' vigor
- *moulting season*: facilitates the forming and development of new feathers (oilseeds)

Net volume: 8 kg

Dosage in separate feeders:

3-4 x a week: 20g (1 measuring scoop) per 6 homing pigeons

2-3 x a week: 20g (1 measuring scoop) per 2kg body weight for ornamental pigeons

3-4 x a week: 20g (1 measuring scoop) per 2kg body weight for ornamental poultry
