PONDEROSA

VitaMixer® B

Vitamin complex for pigeons in situations of B-vitamin deficiencies, especially in stressful situations (races), vaccination periods (e.g. paramyxovirus), growth periods, in case of digestive diseases, infectious diseases, after antibiotic treatment. Has a positive effect on the nervous system, muscle metabolism and epithelial tissues.

VitaMixer® E+Se

Vitamin E is necessary for the maintenance of high fertility and physiological performance of muscles and blood vessels. Selenium in combination with vitamin E contributes to proper development and muscle growth. VitaMixer E+Se should be administered in the breeding period, before pairing, in racing periods, and in cases of vitamin E and selenium deficiency.

VitaMixer® Multi

Excellent combination of the most important vitamins, minerals and amino acids for pigeons. Prevents the results of micronutrient deficiency in periods of increased demand: breeding, separation of young pigeons from mothers, intense growth and development, stressful situations (races and exhibitions), moulting, and recovery from illnesses and after vaccinations

Elektrolyty

The preparation is essential in breeding in case of electrolyte deficiency, particularly during periods of increased effort, especially during the flight season. Its composition contains glycine that plays an important role in detoxification; it binds with toxins and then is excreted in the urine.

Appropriate use of the preparation reduces damage caused by stress (transport, temperature, etc.); helps maintain a proper electrolyte balance; prevents dehydration; and effectively restores vitality after effort.

Forma

Increases the pigeons fitness and psychomotor performance, preparing it for intensive effort. The preparation quickly and effectively regenerates the body after effort and guarantees quicker restoration of fitness. It also serves as protection in case of heat stress - high outside temperatures.

Echinacea

Echinacea is a natural product obtained from plants. It stimulates pigeons immunological system, raises resistance against bacterial and viral infections. Applied after antibiotic therapy, in a state of body weakness (moulting) and stressful situations (flights, exhibitions, vaccinations).

OlejMix

Oils are a very important building material for the whole organism. They play an important role in preventing diseases, especially when the body is weakened by stress, illnesses, use of antibiotics or other drugs.

- ensures silky plumage
- improves fitness and increases energy reserves
- creates own reserves of fat (lecithin)
- increases fertility
- strengthens the body of young pigeons
- increases immunity

ADDITIONAL ENERGY IMPULSE!

Mauser

The preparation supports the formation of healthy and strong plumage, ensuring its high flexibility. Methionine included in the preparation is an essential amino acid containing sulphur. This component is beneficial to the proper functioning of the liver and it is included in the proteins that build up feathers. Choline contained in the preparation is particularly necessary during the period of intense exercises and during the plumage changing period. Vitamin B4 (choline) is essential for the transport and metabolism of fats.

Yeast in liquid

Ensures the maximum convalescence of pigeons, supports oxygen conversion, strengthens immunity, improves form during flights, supports in case of exhaustion and tiredness (raising younglings, flights, moulting)

JodPower®

Preparation for the increase of flying performance of pigeons. Using this product helps achieve very good results (peak form), because it improves blood flow and oxygen transport to cells thanks to the iron included in the preparation - essential for the production of red blood cells. Iron increases the speed of a pigeon returning from a flight. Iodine acts directly on the thyroid gland, increasing endurance and stimulating the metabolism. The product provides vitality and immunity, guarantees snow-white cere, clean throat, glossy feathering and pink chest muscles. Well absorbed iodine and iron greatly improve the health of pigeons.

VirAut®

Preparation containing a mixture of organic acids. Provides effective defense from bacteria (E Coli, Salmonella). Has a stabilising effect, reducing acidity, prevents the fattening of pigeons. Using VirAut positively affects the immune and digestive system (free from yeast and mold). Allows a better nutrient absorption from feed.

RobAut® in liquid

Liquid RobAut consists of natural ingredients on the basis of plant substances having a positive effect on the digestive system. Using the preparation helps protect the pigeons from negative effects of alien organisms in the digestive tract (roundworm, capillaria, tapeworm), which helps achieve better results in breeding and in races.

EukalipsorMint®

The EukalipsorMint supports the proper functioning of the respiratory system. It increases the secretion of mucus, thins the mucus in the nostrils (dry cold) and the bronchi. During the flight season, it is used to improve the physical efficiency. On hot days, the EukalipsorMint protects the mucosa of the respiratory tract from excessive drying. EukalipsorMint has a beneficial impact e.g. on pigeon's immune system.

Apple cider 8%

Apple cider vinegar has been proven to be a perfect acidifier, ensuring low pH in the pigeon's digestive system, and creating a bacteria-free environment (eg. coli, salmonella, etc.). OVIGOR's Apple cider vinegar with an optimal 8% acidity, inhibits the creation of a harmful flora in drinking water. It has a positive effect on blood pressure and the pigeon's digestive system. Thanks to the unique production process, it doesn't give off the unpleasant smell specific to vinegar.

GarlisOil®

Garlic oil, as a natural product, stimulating digestion favorably affects the proper functioning of the digestive tract and improves the functioning of the pigeon's immune system. The active ingredients of garlic create an environment free of germs, yeasts, fungi and viruses. Soybean oil is a source of energy, and lecithin, called a "fat slayer", breaks down fats into particles and prevents them from sticking to blood vessels. Supports muscle endurance. Vitamin E adds vitality (is considered a vitamin of youth).

OviAmin FORTE

OviAmin FORTE is a liquid dietary supplement for pigeons. It contains a large dose of amino acids, electrolytes and vitamin B in optimal proportions. Indispensable during flights (after a competition flight - carbohydrates affect muscle recovery. Amino acids contained in the supplement cause slower muscle fatigue - muscular tissue remains more efficient and intact. Also indispensable during moulting, during drug treatment and in breeding. Due to the composition, the OviAmin FORTE can be administered throughout the year.

OstrosOil

Milk thistle seeds contain silymarin that perfectly protects bird liver and has regenerative effects in case of liver diseases; it also has detoxifying and cleansing properties. It increases gastric acid secretion and increases appetite. It strengthens blood vessel walls. It has beneficial effect on renal parenchyma affecting the excretion of toxic compounds. Soybean oil is a source of energy, whereas lecithin, known as "defeater of fat," breaks down fat molecules and prevents their attachment to blood vessels. It helps maintain muscle strength. Vitamin E provides vitality (considered the vitamin of youth). It also protects the liver, detoxifies it, regulates metabolism and increases appetite.

OviDachol

Prevents excessive build up of fat in the liver and kidneys, and optimizes recovery. Choline ensures, among others, better fat burning. Sorbitol improves the metabolism of proteins, thereby supports muscle growth and proper development of feathers. Very well purifies the blood and the body of toxins, strong muscles become light pink after one day of use.

system. When administered regularly, pigeons have pink muscles and skin on their breasts (visible veins of blood) - a sign of a cleansed organism. The plumage becomes shiny, soft and velvety. It stimulates the appetite, increases the flight performance of pigeons. The aromatic smell of the extracts makes the pigeons eager to drink it.

OviTalina

A perfectly composed blend of 16 herbs, vegetables and fruits extracts, the active substances of which improve the overall condition and resistance of pigeons. Natural plant extracts of carrots, celery, parsley, leek, beetroot, papaya, kiwi, pineapple, thyme, black turnip, horseradish, hawthorn, artichoke, willow bark, coneflowers, nettles found in OviTalina are selected for proper effects on the respiratory tract, digestive system and excretory

OstrosOil

Milk thistle seeds contain silymarin that perfectly protects bird liver and has regenerative effects in case of liver diseases; it also has detoxifying and cleansing properties. It increases gastric acid secretion and increases appetite. It strengthens blood vessel walls. It has beneficial effect on renal parenchyma affecting the excretion of toxic compounds. Soybean oil is a source of energy, whereas lecithin, known as "defeater of fat," breaks down fat molecules and prevents their attachment to blood vessels. It helps maintain muscle strength. Vitamin E provides vitality (considered the vitamin of youth). It also protects the liver, detoxifies it, regulates metabolism and increases appetite

can be burnt to obtain energy. Selenium increases immunity, affects the proper functioning of the liver and the muscle activity. Vitamin B12 supports the creation of hemoglobin, so that the body can absorb more oxygen, which in turn increases endurance. This substance increases the energy and endurance potential. It helps race pigeons to achieve better results. It speeds up the metabolism, which increases form, prevents acidification of muscles and protects them against fatigue (competition races). It maintains high efficiency of skeletal muscles and cardiac muscle.

OviPremium

It is a mixture of aromatic substances with a proven effectiveness of oregano and garlic. The high content of thymol and carvacrol in oregano effectively protects against bacteria such as: salmonella, E-coli streptococci as well as fungi, parasites and coccidia. Garlic, on the other hand, is a natural antibiotic that has a positive effect on the functioning of the pigeon's immune and digestive system. OviPremium supports and maintains good health and regeneration throughout the year and efficiently strengthens the immune

system - especially of young pigeons. The use of this product helps improve the efficiency of the feed and hatching yields. It also helps get better results in races.

Glukoza C

The water-soluble glucose preparation is a source of easily assimilable monosaccharides used for restoring energy reserves. It maintains the appropriate level of water in the body. It also prevents dehydration and accelerates recovery to health and form. Thanks to glucose and vit. C, pigeons easily regenerate their strength and achieve better flight performance.

FIRST DRINK AFTER THE FLIGHT!

GardenMix

GardenMix a mix of natural, light, dried and nutritious vegetables that have not undergone any chemical processing. Vegetables are the natural source of potassium, phosphorus, calcium, magnesium, zinc, copper, iron, molybdenum and iodine; they contain vitamins A, B1, B2, B6, C, PP (parsley, carrot). They contain bacterial substances (onion) and detoxifying substances (parsnip). They prevent anaemia and stimulates appetite (beetroot). Pigeons of the best fanciers feed on garden patches adjacent to their loft in search of valuable vegetables in the fresh form. GardenMix makes it easier for birds, guaranteeing the most valuable of vegetables in a powder form easy to digest.

RobAut

RobAut is a natural product obtained from plants that play a particular role in pigeon diet. It complements the basic feed and ensures a clean gastrointestinal system, protecting pigeons from adverse effects of worms residing in the gastrointestinal system. Therefore, it guarantees good health and greater opportunities to achieve good results in flights and breeding.

Mauser Powder

Plumage powder is a natural mix of herbs supporting moulting of pigeons. It provides the body with nutrients necessary for new feathers to grow. It prevents fragility and dandruff. Plumage powder loosens the skin, facilitating shedding of feathers. It accelerates healing after the shedding. The preparation also strengthens the pigeon's body. For stronger plumage, the preparation should be administered throughout the year, at least once a week. During the moulting period, in order to facilitate the process and ensure a strong plumage, it should be administered 2-3 times a week.

OregaStar

OregaStar is a natural plant preparation with oregano that has mild and multidirectional action. Oregano binds harmful (toxic) products of metabolism and removes them from the body, stimulates the secretion of saliva and gastric juices; increases appetite; strengthens the stomach; improves digestion and assimilation of food. It has carminative properties, enhances the secretion of mucus in the mucous membranes of the upper respiratory tract. Its regular use improves the health and flight condition of pigeons.

PowerMix

- a combination of active compounds that ensures the condition necessary to achieve leading results,
- the preparation contains vitamins, minerals, trace elements, amino acids and other valuable ideally suited compounds,
- applying POWERMIX helps achieve high flight performance (form) of pigeons and activate their metabolism
- has a beneficial effect on the immune system,
- helps with exhaustion and fatigue (rearing of younglings, flights, moulting).

OviCalgen

Ovicalgen is a natural source of calcium with algae and essential oils. It is an excellent preparation necessary throughout the season, supplying minerals, natural vitamins, as well as macro- and micronutrients. Its regular administration will ensure healthy raising and growth of younglings, the perfect condition of flying pigeons and facilitate the formation of new plumage.

- stimulates the growth of younglings and forms a strong skeletal system
- supports the formation of strong eggshells for females
- supports the development of new plumage
- improves digestion and assimilability of feed
- positively affects the bacterial flora of the gastrointestinal system- improves the function of the respiratory system
- strengthens the immunity of pigeons

Brewer's yeast + protein

Brewer's yeast strengthens and stimulates the appetite. It increases feed digestibility, improves fitness and physical performance, and has positive impact in case of digestion disorders. It's the natural source of B vitamins and pantothenic acid, folic acid, vitamin H as well as such trace elements as copper, iron, zinc, iodine and selenium. Today's feeds contain less and less legume seeds (source of protein!) as they are "heavy" to the gastrointestinal system. The perfect replacement is brewer's yeast that contains high-quality and easily assimilable protein. Research in the field of animal nutrition has shown excellent assimilability (90%) of potato protein, obtained in a very difficult and costly process of coagulation of potato cell sap. The share of potato protein makes

Brewer's yeast + protein an irreplaceable source of pure protein of the highest degree of digestibility.

OviMin

OviMin - a natural source of calcium from sea algae, essential to maintain health and to improve the results in the breeding. Besides minerals and trace elements, it contains natural vitamins and micro and macro elements. The algae that it consists stabilize the operation of the digestive tract by stimulating and maintaining the activity of beneficial microflora. Red meal improves digestion and reduces humidity of droppings. OviMin is a product that should be given throughout the year, particularly during periods of increased effort, that is, before mating to lay eggs, during rearing the young, flight season, as well as during the moulting period, what will facilitate the formation of new feathers.

Proteina 66%

PROTEINA is an easy to digest 66 % protein concentrate. Contains animal proteins and plant proteins (multiproteins). It is a natural concentrate that restores and regenerates muscle tissue. Muscles need protein for their quick recovery. The concentrate enables rapid return of pigeons to form after a long flight and prepares pigeons for the next flight. Supports digestion, immune system, promotes moulting. Improves feeding efficiency of nursing parents (faster and healthier growth of young pigeons).

OviGrit

ly digestible grit containing the most important naturally occurring elements and mineral substances. Their presence in everyday feed ensures healthy growth and correct skeletal system formation prevents rickets), it also guarantees good blood circulation as well as nervous and muscular system development. It prevents terrible results of poisoning in a field.

OviBiotytk

OviBiotytk is administered to restore and balance the intestinal flora, populate the bacterial flora in the digestive tract, and in case of digestive disturbances of various origin, also those resulting from nutrition mistakes (e.g. change of pigeon's feed). It brings relief from digestive issues, especially in younger pigeons, facilitates digestion, increases vitamin and mineral absorption. Has a positive effect on the immune system. The composition and concentration of the preparation plays a significant role in supporting the body, reducing the necessary antibiotic application time as well as the recovery time. It protects the body from excessive loss of water and electrolytes. Enterococcus bacteria enable to quickly restore the proper functioning of the intestinal microflora.

Magnesium

Magnesium is an indispensable nutrient. It supports neuromuscular conduction and optimises neuromuscular interaction. Magnesium deficiency in pigeons leads to muscle cramps related to flight difficulty. It reduces the risk of sore muscles during initial training after the winter and during flights. Magnesium is also responsible for the proper calcium absorption in bones and improves the bone density.

MineralVit

Mixture containing vitamins, amino acids, trace and mineral elements. Continuous access to the mixture ensures perfect health, as well as racing and breeding form. It strengthens the immune system and supports moulting.

OviAirFresh

Provides a clean and friendly environment for pigeons. Breathing becomes easier, which allows for a better oxygenation, and therefore better form. Contains eucalyptus oil, mint oil and menthol.

OviBlanco

It is effective against a wide range of pathogenic microorganisms: viruses, moulds, yeasts, mycobacteria. It cleans and perfectly absorbs moisture. It keeps nice lemon smell. The application of this hygienic powder ensures that the floors are dry, white and clean.

JodPower

An optimal iodine and iron content in the preparation ensures maximum stamina and endurance of the pigeons, leading to higher flight speed. Iodine has a positive effect on the growth and development of young birds, as well as the proper functioning of the nervous and reproductive systems. It ensures a clean digestive tract by creating an environment clear of fungi, and protects the pigeons from the problem of "youngling disease".

OviBad

OVIGOR bath salt is indispensable for pigeon baths. It softens the water, thus making feathers silky soft, shiny and flexible after bathing. Bathing with the use of OVIGOR bath salt makes moulting easier for pigeons: it removes dust, dandruff and callous skin. It loosens old feathers and down feathers, thus making their shedding easier. Crystals of essential oils contained in OVIGOR bath salt, soluble in water, have a soothing influence on open pores of the skin, locally relieve pain and improve blood supply in the skin. Additionally they ensure the effect of inhalation, improving the respiratory function.

NaKark

The product eliminates and prevents the spread of external parasites on pigeon skin and plumage, in particular fleas, lice, chewing lice, mites. NaKark can also be administered to ornamental birds.

KORAMIX

Herbal ingredients included in the blend provide excellent protection in case of bacterial and fungal infections. They perfectly support digestive processes, show antispasmodic properties, and bring relief in case of strong diarrhea. Regular administration of the blend significantly accelerates digestive processes and makes the pigeon's plumage shiny.

REGENERAMIX

Herbal blend regenerating the body and cleansing the blood of pigeons returning from races. A blend of herbs that cleanses the pigeon's body after flights. Regular administration of the blend has a regenerating and strengthening effect on pigeons and improves the appearance of plumage. Fucus is a particularly valuable ingredient of the herbal blend; it accelerates metabolism, and protects the daily iodine intake, which facilitates the absorption of iron; iron, on the other hand, supports body's oxygen supply.

OviTalina FORTE

During the racing season, OviTalina FORTE helps achieve greater energy levels and increase flight endurance. It helps quickly regain strength after the race. OviTalina FORTE with added iodine and magnesium was specifically composed to improve the pigeons performance during the racing season. A perfectly composed blend of 17 herbs, vegetables and fruits extracts, enriched with iodine and magnesium, the active substances of which improve the overall condition and resistance of pigeons. Vegetables, fruits and herbs are selected for their proper influence on the respiratory tract, digestive, muscular and vascular systems. Additionally, the preparation has been enriched with chokeberry extract, which contains a wide variety of vitamins and micronutrients; greatly improves immunity and provides energy. When administered regularly, pigeons have pink muscles and skin on their breasts (visible veins of blood) - a sign of a cleansed organism. The plumage becomes shiny, soft and velvety. During the flight season OviTalina FORTE allows to gain more energy and increase flight endurance. Quickly regenerates after a flight. OviTalina FORTE has been specially developed to increase the performance of pigeons during the flight season. The aromatic smell of the extracts makes the pigeons eager to drink it.

Mineral + IRON

A rich combination of minerals, essential for the proper functioning of the pigeon's body. Optimal Iron (Fe) content stimulates the red blood cell production, increases the oxygenation of muscles and raises their endurance. Iron is a component of red blood cells. It has a great impact on the pigeons' chest muscles, turning their colour into a deep pink, and preventing the skin from flaking. The preparation facilitates the creation of strong eggshells and, during the raising period, helps develop strong bones in young birds. During the racing season, the preparation ensures the proper functioning of the muscular and nervous systems. In the moulting season, it helps develop healthy, strong feathers. It strengthens the pigeon's immune system and physical fitness. Minerals are most bioavailable in the liquid state.

NEW!!!

PowerMix TABS

- accelerated strength recovery
- combats fatigue
- optimal composition of vitamins, amino-acids, electrolytes, trace elements, and energy carriers, ensuring great condition, essential to achieve great results
- positive effect on immune system

RobAut TABS

RobAut TABS is a natural product obtained from plants that play a particular role in the pigeon's diet. It ensures a clean gastrointestinal system, protecting pigeons from adverse effects of gastrointestinal parasites. It guarantees great condition in flights, and good results in breeding. Binds liquid excrement (food poisoning, diet change, stressful situations)

Proteina 66% TABS

PROTEINA 66% TABS is an easy to digest protein concentrate, which rebuilds and regenerates the pigeons' muscle tissue. The concentrate enables rapid return of pigeons to form after a long flight and prepares pigeons for the next flight. Supports digestion, immune system, promotes moulting. Improves feeding efficiency of nursing parents (faster and healthier growth of young pigeons).
