OVIGOR PONDEROSA – Tradition and Quality for Over 35 Years

Dear Fanciers!

TRADITION, KNOWLEDGE, RELIABILITY, AND AFFORDABLE PRICES have been the foundations of the **OVIGOR PONDEROSA** philosophy for over 35 years!

In the 2026 catalog, we present a range of products designed to support your breeding. The level of competition is increasing year by year – to ensure your racing pigeons can meet the challenges, supporting their health, optimal condition, and rapid recovery is crucial.

On pages 4-5 of the catalog, you will find a detailed feeding plan with valuable tips on how to ensure the long-term development and success of your breeding program. The quality of our products is our highest priority – a standard that has been highly valued by breeders in Europe and other countries for years.

It's worth mentioning that, in addition to OVIGOR products, our OVIGOR PONDEROSA breeding station provides breeders with a solid foundation for success.

Our breeding skills, proven by years of experience, focus on maintaining the most faithful genotype of our distinguished ancestors. This guarantees access to pigeons with excellent genes from lines such as **Janssen, Van Loon, Vandenabeele, Heremans-Ceusters, Remy de Mey, Koopman, Aarden, Van Wanroy, Van de Wegen, Eijerkamp.**

The renowned **Muller** line has returned to Ponderosa, and the coveted **Leidemann** line has recently joined.

Good flights!

OviBlack 30 ml

OviBlack stops the development of pathogenic microbe (eg. antibiotic-resistant microbe), cleaning the digestive tract of bacterial toxins and other harmful products of metabolism. It creates an environment free of canker, parasites (coccidia), bacteria (salmonella) and viruses in the mucous membrane, esophagus, and the craw. It nourishes the pigeon's body and cleanses the blood. Sorrel is also a great source of zinc and vitamin A, used for the treatment of skin problems, like a balding craw.

Dosage:

Beak, esophagus and craw hygiene:

- Post-winter treatment: 1 drop orally, 20 drops in 1l water over the next 3 days
- During egg incubation: 7-9 days from hatching - 1 drop orally, 20 drops in 1l Water over the next 2 days
- Weaning period - 1 drop orally, once
- Before old-pigeon races - approx. 14 days before the flight, 1 drop orally, once
- During old-pigeon races - 1 drop orally between flight 6 and 7
- Before young-pigeon races - approx. 14 days before the flight, 1 drop orally, once, and 20 drops in 1l water over the next 2 days
- After the racing season, and for new pigeons in the lost - 1 drop orally over the next 2 days

VirAut[®] 1000 ml

Feed mixture based on a blend of organic acids: formic acid, citric acid, lactic acid and lignosulphonic acid.

- supports regeneration during treatment (young pigeon disease, adenovirus infection)
- supports proper functioning of the digestive system (free from fungi and mold)
- effectively protects against bacteria
- boosts the pigeon's immune system
- prevents fattening

Dosage:

- Young pigeons after weaning: 10 ml / 1 kg feed, 2-3 x weekly
- Cure- 10 ml / 1 kg of easily digestible food for 3-4 consecutive days
- Mating - 2 x daily: 5 ml / 1 kg food (1 x weekly)
- Travel time - 2 x daily: 5ml / 1 kg food (1 x at the beginning of the week)
- Moulting and winter time - 2 x daily: 5 ml / 1 kg feed (1 x weekly)

RobAut[®] Essence 250 ml

RobAut Essence consists of natural ingredients on the basis of plant substances having a positive effect on the digestive system. using the preparation helps protect the pigeons from negative effects of alien organisms in the digestive tract (roundworm, capillaria, tapeworm), which helps achieve better results in breeding and in races.

Dosage: 10 ml / 1 l water or 10 ml / 750 g feed

- 10 days before planned vaccination - use for 3 days.
- 14 days before planned breeding - use for 2 days.
- 14 days before competition flights - use for 3 days, after 4 weeks repeat - for 2 days.
- after flights of old and young pigeons - use for 3 days.

Parasites

RobAut[®] / RobAut[®] TABS 300 g 65 g (ca. 190 pcs)

RobAut is a natural product derived from plants that play an important role in a pigeon's diet. Ingredients like tansy and wormwood ensure a digestive system free of roundworms, capillaria, tapeworms, ensuring better breeding and racing results. Greatly enhances food bioavailability. Prevents symptoms of diarrhea - binds loose excrement (food poisoning in the field, feed change, stress). The stool becomes stable and dry.

Dosage:

- RobAut - 10g / 1 kg of feed - treatment - 2x a day over 5 days. Repeat after a 14-day break, every 2 months (approx. 14 days before pairing, flying and moulting). Moisten the feed with an OVIGOR oil (GarlisOil, OregasOil), add RobAut Powder and stir. Once the powder sticks to the grain, the feed is ready to be served.
- RobAut TABS - 1 1 tab twice a day
 - winter treatment: 5 days (continuous administration). After a 14-day break, repeat for 5 days again.
 - approx. 14 days before pairing: twice a day for 3 days (continuous administr.).
 - flight season: every 3rd week for 2 days (beginning of the week).
 - rearing and moulting: 2 days (continuous administration)

Parasites

Digestion

Pathogens

GardenMix® 500 g

GardenMix a mix of natural, light, dried and nutritious vegetables that have not undergone any chemical processing. Vegetables are the natural source of potassium, phosphorus, calcium, magnesium, zinc, copper, iron, molybdenum and iodine; they contain vitamins A, B1, B2, B6, C, PP (parsley, carrot). They contain bacterial substances (onion) and detoxifying substances (parsnip). They prevent anaemia and stimulates appetite (beetroot). Pigeons of the best fanciers feed on garden patches adjacent to their loft in search of valuable vegetables in the fresh form. GardenMix makes it easier for birds, guaranteeing the most valuable of vegetables in a powder form easy to digest.

Dosage: 20g/1kg of feed, every 2nd-3rd day to one of the meals. Moisten 1 kg of feed with an OVIGOR oil (e.g.: OregasOil, OlejMix), pour GARDENMIX and stir. After the powder sticks to the grain, the feed is ready to be served.

OviPremium 300 g

OviPremium is a natural plant preparation of oregano and garlic. The high content of thymol and carvacrol in oregano effectively protects against bacteria, fungi, parasites and coccidia. Garlic has a positive effect on the functioning of the pigeon's immune and digestive system. OviPremium supports and helps maintain good health and regeneration throughout the year and effectively strengthens the immune system – especially of young pigeons. The use of this product helps improve the efficiency of the feed and hatching yields. It also helps get better results in races.

Dosage: 5 g / 1 kg feed throughout the year. young pigeons, after weaning - 2-3 times a week.

OregaStar is a natural plant preparation with oregano that has mild and multidirectional action. Oregano binds harmful (toxic) products of metabolism and removes them from the body, stimulates the secretion of saliva and gastric juices; increases appetite; strengthens the stomach; improves digestion and assimilation of food. It has carminative properties, enhances the secretion of mucus in the mucous membranes of the upper respiratory tract. Its regular use improves the health and flight condition of pigeons by improving patency of respiratory tract, improving assimilability of food, creating an environment free of fungi and bacteria (salmonella, coli, coccidia, streptococcus, etc.)

Dosage: 10 g / 1 kg feed

It is recommended to be served throughout the year, 2x a week, especially in hatching and moulting periods. Moisten the feed with an OVIGOR oil (OregasOil, GarlisOil), add OregaStar and mix. Once the powder binds to the grain, the feed is ready to be served.

GarlisOil 250 ml

Garlic oil, as a natural product, stimulating digestion favorably affects the proper functioning of the digestive tract and improves the functioning of the pigeon's immune system. The active ingredients of garlic create an environment free of germs, yeasts, fungi and viruses. Soybean oil is a source of energy, and lecithin, called a "fat slayer", breaks down fats into particles and prevents them from sticking to blood vessels. Supports muscle endurance. Vitamin E adds vitality (is considered a vitamin of youth).

Dosage: 10-15ml of GarlisOil pour on 1kg of food and mix thoroughly. Another preparation in a powder form (e.g. OregaStar, GardenMix, RobAut, OviYeast PRO) can be added to the prepared portion. GarlisOil should be used 1-2 times a week throughout the year.

Energy

Strengthening

Immunity

OlejMix

250 ml

Oils are a very important building material for the whole organism. They play an important role in preventing diseases, especially when the body is weakened by stress, illnesses, use of antibiotics or other drugs.

- ensures silky plumage
- increases fertility
- strengthens the body of young pigeons

Dosage: 10-15 ml over 1 kg feed.

- breeding and young pigeons - 1x a week
- flying and moulting season - 2x a week (beginning and end of the week).

- creates own reserves of fat (lecithin)
- increases immunity

Immunity

Digestion

Strengthening

OviYeast Essence

250 ml

Ensures the maximum convalescence of pigeons, supports oxygen conversion, strengthens immunity, improves form during flights, supports in case of exhaustion and tiredness (raising younglings, flights, moulting).

Dosage: Pour about 10-15 ml to 1 kg of feed and mix carefully.

- flight season: 2 times in the beginning of week (2 next days)
- breeding season: 1 time a week
- moulting season: 2 times a week

The prepared feed can be supplemented by a different preparation in a powder form (e.g. GardenMix, RobAut, OviCalgen, Glukoza C, etc.).

OregasOil

250 ml

The oregano extract is a natural, mild and versatile product. It stimulates the secretion of saliva and gastric juices; increases appetite; strengthens the stomach; improves digestion and assimilation of food. It also improves the functioning of the pigeon's respiratory system. Soybean oil is a concentrated source of energy with lecithin - it breaks down fat molecules and prevents their attachment to blood vessels. It improves the binding and excretion of toxic substances, and energizes the bird.

Dosage: 10-15 ml over 1 kg feed.

Serve throughout the year - 2x a week.

Parasites

Digestion

Pathogens

OviYeast PRO

600 g

Brewer's yeast strengthens and stimulates the appetite. It increases feed digestibility, improves fitness and physical performance, and has positive impact in case of digestion disorders. It's the natural source of B vitamins and pantothenic acid, folic acid, vitamin H as well as such trace elements as copper, iron, zinc, iodine and selenium. Today's feeds contain less and less legume seeds (source of protein!) as they are "heavy" to the gastrointestinal system. The perfect replacement is brewer's yeast that contains high-quality and easily assimilable protein. Research in the field of animal nutrition has shown excellent assimilability (90%) of potato protein, obtained in a very difficult and costly process of coagulation of potato cell sap.

Dosage: 10g / 1kg of feed

- Raising younglings: 2-3 times,
- Flights: day after return
- all year round: 1-2 x per week

Immunity

Digestion

Strengthening

Mineral + IRON

500 ml

A rich combination of minerals, essential for the proper functioning of the pigeon's body. Optimal Iron (Fe) content stimulates the red blood cell production, increases the oxygenation of muscles and raises their endurance. Iron is a component of red blood cells. It has a great impact on the pigeons' chest muscles, turning their colour into a deep pink, and preventing the skin from flaking. The preparation facilitates the creation of strong eggshells and, during the raising period, helps develop strong bones in young birds. During the racing season, the preparation ensures the proper functioning of the muscular and nervous systems. In the moulting season, it helps develop healthy, strong feathers.

Dosage: 3-5 ml / 1 l water

- Preparation for breeding: start serving approx. 14 days before pairing, twice a week
- Raising of young pigeons: 3 times a week
- After weaning young pigeons: twice a week
- Racing season: once a week (beginning of the week)
- Moulting season: 3 times a week, combined with OVIGOR Mauser liquid

Plumage

Strengthening

Immunity

OviAmin FORTE®

1000 ml

OviAmin FORTE is a liquid dietary supplement for pigeons. It contains a large dose of amino acids, electrolytes and vitamin B in optimal proportions. Indispensable during flights (after a competition flight - carbohydrates affect muscle recovery. Amino acids contained in the supplement cause slower muscle fatigue - muscular tissue remains more efficient and intact. Also indispensable during moulting, during drug treatment and in breeding. Due to the composition, the OviAmin FORTE can be administered throughout the year.

Dosage: 15 ml über 1 Liter Wasser oder 1 Kilo Futter

- Reisezeit: erstes Tränken nach dem Wettflug, Ende der Woche – vor dem Wettflug
- Mauser: 3-5 Mal wöchentlich
- Arzneimittelbehandlung: täglich
- Aufzucht von Jungtauben: 2-4 Mal wöchentlich

Energy

Plumage

Regeneration

Strengthening

Immunity

Energy

Regeneration

Strengthening

VitaMixer® Multi

500 ml

Excellent combination of the most important vitamins, minerals and amino acids for pigeons. Prevents the results of micronutrient deficiency in periods of increased demand: breeding, separation of young pigeons from mothers, intense growth and development, stressful situations (races and exhibitions), moulting, and recovery from illnesses and after vaccinations.

Dosage: 2-5 ml / 1 l water, once a day

- breeding, moulting - 2x a week (combined with Ovigor Mineral+IRON)
- races - 2x a week (start and end of the week)
- regeneration - 3x a week

VitaMixer® E+Se

250 ml

Vitamin E is necessary for the maintenance of high fertility and physiological performance of muscles and blood vessels. Selenium in combination with vitamin E contributes to proper development and muscle growth. VitaMixer E+Se should be administered in the breeding period, before pairing, in racing periods, and in cases of vitamin E and selenium deficiency.

Dosage: 5 ml / 1 l of water - once a day, pairing - 3 times a week, 30 days before pairing day

Strengthening

OviTalina

1000 ml

A perfectly composed blend of 16 herbs, vegetables and fruits extracts, the active substances of which improve the overall condition and resistance of pigeons. Natural plant extracts of carrots, celery, parsley, leek, beetroot, papaya, kiwi, pineapple, thyme, black turnip, horseradish, hawthorn, artichoke, willow bark, coneflowers, nettles found in OviTalina are selected for proper effects on the respiratory tract, digestive system and excretory system. When administered regularly, pigeons have pink muscles and skin on their breasts (visible veins of blood) - a sign of a cleansed organism. The plumage becomes shiny, soft and velvety. It stimulates the appetite, increases the flight performance of pigeons. The aromatic smell of the extracts makes the pigeons eager to drink it.

Dosage: The highest efficiency of the OviTalina product is obtained through systematic, yearlong usage.

- Reproduction Period: 2 x 10 ml/ 1 liter water or 1 kg of feed - 2 x per week twice a day.
- Withdrawal of young pigeons, it is recommended to be administered for 10 days (10 ml/ 1 liter water) - 2 x per day.
- Flight season: 2 x per day (beginning of the week) 10-20 ml/ 1 liter of water or 10 ml/ 1kg of feed.
- Moulting: 2 x per day 3 x per week 10-20 ml/ 1 liter of water or 10 ml/ 1 kg of feed
- Winter period - 3 x per week 10-20 ml/1 liter of water or 10 ml/1 kg of feed.

OviTalina FORTE

500 ml

A perfectly composed blend of 16 herbs, vegetables and fruits extracts, the active substances of which improve the overall condition and resistance of pigeons. Vegetables, fruits and herbs are selected for their proper influence on the respiratory tract, digestive, muscular and vascular systems. When administered regularly, pigeons have pink muscles and skin on their breasts (visible veins of blood) - a sign of a cleansed organism. The plumage becomes shiny, soft and velvety. During the flight season. OviTalina FORTE allows to gain more energy and increase flight endurance. Quickly regenerates after a flight. OviTalina FORTE has been specially developed to increase the performance of pigeons during the flight season. The aromatic smell of the extracts makes the pigeons eager to drink it.

Dosage:

- treatment before the flight season: 14 days after 15 ml / 1 liter of water or per 1 kg of feed
- flight season: 2-3 x a week, 10 ml / 1 liter of water or per 1 kg of feed per week
- moulting period: 1-2 x weekly 10 ml / 1 liter of water or per 1 kg of feed per week
- reproductive period: 1 x per week, 10 ml / 1 liter of water or per 1 kg of feed per week
- a noticeable drop in flight form: 15 ml / 1 liter of water or per 1 kg of feed for ca. 4-5 days

Magnesium

500 g

Magnesium is an indispensable nutrient. It supports neuromuscular conduction and optimises neuromuscular interaction. Magnesium deficiency in pigeons leads to muscle cramps related to flight difficulty. It reduces the risk of sore muscles during initial training after the winter and during flights. Magnesium is also responsible for the proper calcium absorption in bones and improves the bone density.

Dosage: Training after the winter and racing flights: 5-10 g per 1 kg of the feed. Use during flights: one day before the flight together with OlejMix and PowerMix.

JodPower®

500 ml

An optimal iodine and iron content in the preparation ensures maximum stamina and endurance of the pigeons, leading to higher flight speed. Iodine has a positive effect on the growth and development of young birds, as well as the proper functioning of the nervous and reproductive systems. It ensures a clean digestive tract by creating an environment clear of fungi, and protects the pigeons from the problem of "youngling disease".

Dosage: 2x a week: 10 ml / l of water or 1 kg of feed Apply during races, breeding periods, moulting periods, and in the winter

Proteina 66% Proteina 66% TABS

500 g, 250 g, 74g (ca. 240 pcs.)

Proteina is an easy to digest 66 % protein concentrate. Contains powdered milk protein and plant proteins (multiproteins), including proteins obtained through a complex technological process of potato starch sourcing. It is a natural concentrate that restores and regenerates muscle tissue. Muscles need protein for their quick recovery. The concentrate enables rapid return of pigeons to form after a long flight and prepares pigeons for the next race. Supports digestion, immune system, promotes moulting. Improves feeding efficiency of nursing parents (faster and healthier growth of young pigeons).

Dosage:

- Proteina 66%
 - Flight season:
 - after flight - 20g / 1 kg of feed moistened before with OviDachol,
 - before flight - 20g / 1 kg of feed moistened before with OlejMix.
 - Breeding and moulting season:
 - 4 meals a week 20g / 1 kg of feed moistened beforehand with OviDachol or OlejMix
- Proteina 66% TABS - 2 tabs once a day
 - young pigeons during muscle growth: 2 tabs - twice a week
 - moulting period: 2 tabs - twice a week
 - flight season: after flight (depending on the difficulty of the race - 2-4 tabs).
 - before flight - over 500 km: for 3 days before the flight Over 700 km: for 4 days before the flight

PowerMix® / PowerMix® TABS

600 g, 300 g 80g (ca. 250 pcs)

A combination of active compounds that ensures the condition necessary to achieve leading results. The preparation contains vitamins, minerals, trace elements, amino acids and other valuable ideally suited compounds. Applying PowerMix helps achieve high flight performance (form) of pigeons and activate their metabolism. Has a beneficial effect on the immune system. Helps with exhaustion and fatigue (rearing of younglings, flights, moulting)

Dosage:

- PowerMix: 10 - 20g per 1kg of feed in combination with Oil Mix (before the flight as a dose of energy) and 10 - 20g per 1kg of feed in combination with Liquid Yeast (after the flight for regeneration)
 - flight season: 2-3 times a week (4 feedings before putting on the flight)
 - breeding season: 1 time a week
 - moulting season: 2 times a week
- PowerMix TABS: 1-2 tabs, once a day
 - Racing pigeons: on the last two days before the flight 2 tabs and after the flight to strengthen the body 1-2 tabs
 - Preparation for breeding: twice a week - 1-2 tabs (4 weeks before pairing)
 - Raise of young birds, moulting, exhibitions: twice a week - 2 tabs

OviSprint + Carnitine 500 ml

The function of carnitine is based on the transport of free fatty acids to the cells, where those acids can be burnt to obtain energy. Selenium increases immunity, affects the proper functioning of the liver and the muscle activity. Vitamin B12 supports the creation of hemoglobin, so that the body can absorb more oxygen, which in turn increases endurance. This substance increases the energy and endurance potential. It helps race pigeons to achieve better results. It speeds up the metabolism, which increases form, prevents acidification of muscles and protects them against fatigue (competition races). It maintains high efficiency of skeletal muscles and cardiac muscle.

Dosage: 10 ml / 1 liter of water or 15 ml / 1 kg of feed

- short-distance flights: for 2 days before the race (the basketing day – fresh water)
- medium-distance flights: for 4 days before the race (the basketing day – fresh water)
- long-distance flights: for 5 days before the race (also on the day of basketing)

Lungs

Immunity

EukalipsorMint®

1000 ml

BESTSELLER

The EukalipsorMint supports the proper functioning of the respiratory system. It increases the secretion of mucus, thins the mucus in the nostrils (dry cold) and the bronchi. During the flight season, it is used to improve the physical efficiency. On hot days, the EukalipsorMint protects the mucosa of the respiratory tract from excessive drying. EukalipsorMint has a beneficial impact e.g. on pigeon's immune system.

Dosage: 10 ml / 1 liter of water
- cleaning after winter - 5-7 days
- young pigeons - 1 x per week
- racing season - 2 x per week (beginning of a week)
- moulting season - 2 x per week
- changes in the respiratory system - 10-14 days

OviAirFresh

500 ml

Provides a clean and friendly environment for pigeons. Breathing becomes easier, which allows for a better oxygenation, and therefore better form. Contains eucalyptus oil, mint oil and menthol.

Dosage: 2-3 times a week - spray over the whole surface of the loft. Can be used throughout the year, especially in periods of higher humidity and higher temperatures.

Lungs

Digestion

Plumage

Regeneration

OviDachol

500 ml

Prevents excessive build up of fat in the liver and kidneys, and optimizes recovery. Choline ensures, among others, better fat burning. Sorbitol improves the metabolism of proteins, thereby supports muscle growth and proper development of feathers. Very well purifies the blood and the body of toxins, strong muscles become light pink after one day of use.

Dosage: 10 ml / 1 liter of water or 750g of feed
- breeding - 2-3 times per week
- moulting - 2-3 times per week
- after competition flight - 1-2 next days (start of the week)
- after antibiotic treatment - 3-4 next days

OviBiotyk

250 g

OviBiotyk is administered to restore and balance the intestinal flora, populate the bacterial flora in the digestive tract, and in case of digestive disturbances of various origin, also those resulting from nutrition mistakes (e.g. change of pigeon's feed). It brings relief from digestive issues, especially in younger pigeons, facilitates digestion, increases vitamin and mineral absorption. Has a positive effect on the immune system. The composition and concentration of the preparation plays a significant role in supporting the body, reducing the necessary antibiotic application time as well as the recovery time. It protects the body from excessive loss of water and electrolytes. Enterococcus bacteria enable to quickly restore the proper functioning of the intestinal microflora.

Dosage: 5 g on 1 kg feed
- breeding - 2x a week
- moulting - 2x a week
- flying - 2 meals a day over 2 days at the start of the week
- after treatment - 10 g over 1 kg feed over 2-3 days straight for the restoration of the digestive system's microflora

NaKark

25 ml

BESTSELLER

The product eliminates and prevents the spread of external parasites on pigeon skin and plumage, in particular fleas, lice, chewing lice, mites.

Dosage:
- Prophylactically : 2 drops per 1kg body weight. Apply on the neck skin (for pigeons 1 drop)
- For parasite carriers : 6 drops per 1 kg body weight. Apply 2 drops on the neck skin and 2 on each wing (for pigeons 1 drop).

Effective for up to 6 weeks after application.

Elektrolyt

500 ml

The preparation is essential in breeding in case of electrolyte deficiency, particularly during periods of increased effort, especially during the flight season. Its composition contains glycine that plays an important role in detoxification; it binds with toxins and then is excreted in the urine. Appropriate use of the preparation reduces damage caused by stress (transport, temperature, etc.); helps maintain a proper electrolyte balance; prevents dehydration; and effectively restores vitality after effort.

Dosage:

- 5ml / 1l water - before stressful situations (exhibitions, loft change, transport), over 2-3 days
- 3ml / 1l water - immediately after the return from flight,
- 3ml / 1l water - regeneration (after treatment, flight, etc.), over 2-3 days,
- 1ml / 2l water - preventive treatment (e.g. hot days), daily.

Glukoza C

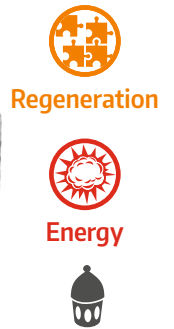

400 g

The water-soluble glucose preparation is a source of easily assimilable monosaccharides used for restoring energy reserves. It maintains the appropriate level of water in the body. It also prevents dehydration and accelerates recovery to health and form. Thanks to glucose and vit. C, pigeons easily regenerate their strength and achieve better flight performance.

FIRST DRINK AFTER THE FLIGHT!

Dosage: 10g per 1 liter of water

- shall be given as the first drink on return from flight
- after diseases and during moulting: for 2-3 days

Digestion

Immunity

Parasites

OviNegar 8%

1000 ml

Apple cider vinegar has been proven to be a perfect acidifier, ensuring low pH in the pigeon's digestive system, and creating a bacteria-free environment (eg. coli, salmonella, etc.). OviNegar with an optimal 8% acidity, inhibits the creation of a harmful flora in drinking water. It has a positive effect on blood pressure and the pigeon's digestive system. Thanks to the unique production process, it doesn't give off the unpleasant smell specific to vinegar.

Dosage: 10 ml / 1 l of water - all year long 2-3 times a week. In the period before pairing and after weaning, administer daily for 10 days.

RegeneraMix

300 g

A blend of 18 carefully selected herbs, the properties of which boost regeneration and strengthen the pigeon's body, especially after races, in periods of illness and overall weakness, as well as before the exhibition season. Regular administration of the blend aids the pigeon's respiratory system, cleanses its blood, boosts metabolism and improves the appearance of plumage.

Dosage: 10 g (pour 3 measures) into a filter, brew in 2l of boiled water.

- Administer a cooled blend year-round 1-2 times a week,
- Racing season: 2-3 times a week,
- Moulting season: 2 times a week,
- Periods of weakness, post medical treatment, before exhibitions: 2-3 times a week

Plumage

Strengthening

Mauser

500 ml

The preparation supports the formation of healthy and strong plumage, ensuring its high flexibility. Methionine included in the preparation is an essential amino acid containing sulphur. This component is beneficial to the proper functioning of the liver and it is included in the proteins that build up feathers. Choline contained in the preparation is particularly necessary during the period of intense exercises and during the plumage changing period. Vitamin B4 (choline) is essential for the transport and metabolism of fats.

Dosage: 10 ml / 1 l water or 1 kg feed

- breeding period: 2x a week (younglings over 8 days)
- moulting period: 2-3 times a week.

Mauser Powder

350 g

Plumage powder is a natural mix of herbs supporting moulting of pigeons. It provides the body with nutrients necessary for new feathers to grow. It prevents fragility and dandruff. Plumage powder loosens the skin, facilitating shedding of feathers. It accelerates healing after the shedding. The preparation also strengthens the pigeon's body. For stronger plumage, the preparation should be administered throughout the year, at least once a week. During the moulting period, in order to facilitate the process and ensure a strong plumage, it should be administered 2-3 times a week.

Dosage: 10 g / 1 kg feed - 2x a day

- breeding - 1x a week
- moulting - 2-3x a week

Hygiene

OviBlanco

2 kg, 10 kg

Pigeon droppings and frequent excess moisture in the pigeons' environment (pigeon lofts) promote the growth of pathogenic microorganisms such as viruses, molds, yeasts, and mycobacteria. OviBlanco, thanks to its unique hygroscopic properties, effectively absorbs excess moisture, preventing the development of pathogens on floors. It leaves a pleasant lemon scent. When OviBlanco powder is used, floors remain dry, white, and clean.

Dosage: Spread OviBlanco powder evenly in a thin layer (e.g., using a strainer) on the floor of rooms and cages

OviBad OviBad Essence

1000g, 500g, 1000 ml

OVIgor bath salt is indispensable for pigeon baths. It softens the water, thus making feathers silky soft, shiny and flexible after bathing. Bathing with the use of OVIgor bath salt makes moulting easier for pigeons: it removes dust, dandruff and callous skin. It loosens old feathers and down feathers, thus making their shedding easier. Crystals of essential oils contained in OVIgor bath salt, soluble in water, have a soothing influence on open pores of the skin, locally relieve pain and improve blood supply in the skin. Additionally they ensure the effect of inhalation, improving the respiratory function.

Dosage:

- OviBad - 10 g to 5l of water and mix. After about 5-10 minutes (period requires for essential oils to dissolve), re-mix.
- OviBad Essence - Pour 10ml to 5 l of water.

Repeat baths 1-2 times a week throughout the year. Shake well before use!!!

OviCalgen

1000 g

OviCalgen is a natural source of calcium with algae and essential oils. It is an excellent preparation necessary throughout the season, supplying minerals, natural vitamins, as well as macro- and micronutrients. Its regular administration will ensure healthy raising and growth of younglings, the perfect condition of flying pigeons and facilitate the formation of new plumage.

Dosage: 10 g over 1 kg feed moistened with an OVIGOR oil (eg. OregasOil) mix until the powder binds to the grain.

OviGrit 1, 2, 3, 4

25 kg, 2,5 kg

Easily digestible grit containing the most important naturally occurring trace elements and mineral substances. Their presence in everyday feed ensures healthy growth and correct skeletal system formation (prevents rickets), it also guarantees good blood circulation as well as nervous and muscular system development. It prevents terrible results of poisoning in a field.

Dosage: OviGrit 1/2/3/4 should be served

to pigeons in separate bowls for free consumption, following the rule of "less but more frequent" to prevent the contamination of the mixture.
